

Continuous connectivity on the go

Any type of vehicle, anywhere.

Connectivity

Our Hybrid User Terminal (HUT) lets you switch seamlessly between terrestrial and satellite networks. If one network moves out of range, another replaces it instantly, with no interruption for the user.

With our technology, you or your customers will stay connected in any vehicle type, anywhere.

Your own self-driving shuttle

Imagine a self-driving shuttle with your own brand at your campus, airport, city, golf course, real estate development or any other site.

We can take care of:

- Importing and insuring your shuttle
- Route mapping
- Training vehicle safety operators
- Data collection and analysis
- Integration with existing systems

Self-driving cars need a reliable connection at all times. We provide that connection, and much more.

If you'd like to know more about any of our work or services, contact us: services@darwincav.com
